## PROJECTS — more in portfolio

### [Counting Rows](#) [ [Demo](#) ]

Barebones web application that keeps track of the number of rows knitted of various charts and/or patterns.

Each counter is saved to and loaded from localStorage for extra simplicity.

Made with [Svelte](#) and [TailwindCSS](#).

### “KSTAN” [ [User Flows](#) ]

A one-stop resource to locate and bookmark cafes, restaurants, etc. associated with popular Korean Pop idols.

A collaborative project in which I am designing the UX and code architecture.

[Figma](#) for workflows and prototypes; [Notion](#) for collaborative task & note organization.

### [Kumho Compiler](#)

A command-line interface written in Python.

Automates the process of combing through a large volume of files for data and synthesizing that data into

Microsoft Excel tables and graphs. Written specifically for a friend's business.

## WORK
